

THE BLUE BOX RECORDER

Complete in-car computing and recording solution.

This revolutionary new product by Ace Internet Solutions gets its name from the service it provides. Similar to a black box recorder in an aircraft, the Blue Box Recorder (BBR) provides unique information about your public service vehicle. Fully equipped, the BBR is essential to the safety and efficiency of your fleet and the personnel behind it.

Mounted next to the rear view mirror, the camera module will record everything the vehicle operator sees. With the capacity to store 7 days worth of 24 hour video, the BBR can provide an essential second pair of eyes. An optional wireless transmitter can use the advanced cellular or Wi-Fi networks to transmit the live video feed from the vehicle directly to your dispatch or monitoring center.

Instantly locate one vehicle or an entire fleet with optional GPS module. When combining the GPS module with a wireless transmitter, the vehicle location is reported every 5 seconds to a tracking web site. Efficiently route vehicles or even send dispatch location information directly to the vehicle.

Founded in 2001 as a division of Ace Industries, Ace Internet Solutions provides innovative technology and telecommunications products to the private and public sectors.
